

Inlay Manufacturers

Explosive growth in RFID-tracked medications create enticing opportunities for inlay manufacturers to offer unique products to differentiate themselves in the pharmaceutical supply chain. The UnitVisID™ Alliance Specification and ecosystem provides a roadmap for faster time-to-market and multi-vendor interoperability across all components.

What is UnitVisID?

UnitVisID is a specification maximizing the full potential of RFID for medications dispensed in hospital and healthcare organization pharmacies. The specification was developed and is maintained by UnitVisID Alliance members who are leading companies in the pharmaceutical ecosystem. Today, UnitVisID has accurately tracked 210+ million shipments of medications from manufacturing to patient use.

Our goal is to ensure the accuracy, performance, and interoperability of RFID-tagged medications as they move through the supply chain — from manufacturing to pharmacies and ultimately to patient administration — while interacting with systems and software along the way to solve pharmacy issues and create better patient outcomes.

UnitVisID Certified products rely on existing standards like RAIN and GS1, and have been tested to ensure:

Performance

Use of only the best RFID inlay for the size, shape, material, and application environments

Interoperability

Every medication and its unique attributes are read by all UnitVisID Certified hardware devices

Accuracy

A full and evolving record of each medication's properties and event history is stored safely in the UnitVisID Registry

Benefits of UnitVisID Certified Solutions

Interoperability

The UnitVisID Specification uses RAIN and GS1 and is interoperable with GTIN, SGTIN, DSCSA, and other standards.

RFID Portfolio

UnitVisID offers a portfolio of certified RFID inlays designed for any size, shape and material for medication containers.

Accelerate Time-to-Market

Access to independent 3rd party testing facilities offering faster time-to-market by pre-certifying inlays.

Multi-Vendor Interoperability Across All Components

Performance

RFID technology for medication containers is a growth market for inlay manufacturers. However, the wide variety of containers used in a pharmacy make high performance of RFID solutions a tall order. With UnitVisID, it's possible to scan and store hundreds of fluid-filled glass and plastic containers at once, in seconds, with no errors. The UnitVisID specification defines the performance requirements for inlays – the combination of antenna and integrated circuitry that makes an RFID work – for the challenging pharmacy environment filled with a variety of packaged products and fluid-filled containers being scanned in a densely-packed environment.

UnitVisID Certification

Your inlay may be designated as UnitVisID Certified by meeting the quality and performance specifications designated by UnitVisID Alliance after it is validated and with your guarantee of safety stock for Alliance members while ensuring open access to all pharmaceutical manufacturers and 503B outsourcing facility Alliance members.

UnitVisID Alliance Membership

UnitVisID Alliance is open to any organization interested in supporting our mission. Current members include RFID companies, pharmaceutical manufacturers, 503B outsourcing facilities, inlay manufacturers, label converters, and service suppliers. Most importantly, a continually growing number of hospitals and healthcare organizations are actively involved in the Alliance.

Become a member now and achieve greater production efficiencies for your products while collaborating with leaders from across the healthcare industry developing cutting-edge practices leveraging RFID to drive pharmacy workflow improvements.

About UnitVisID Alliance

UnitVisID is the first open, member-driven Alliance advancing the use of radio-frequency identification (RFID) tagged medications in healthcare. The Alliance brings together the leading companies in the pharmaceuticals ecosystem to lead, collaborate, and develop RFID specifications that ensure accuracy, performance, and interoperability. UnitVisID is the #1 choice used by more than 1,000+ hospitals and healthcare organizations. More than 210 million RFID-tagged medications utilizing the UnitVisID platform have been scanned – exponentially more than any other RFID system in the US healthcare space.
