

Pharmaceutical Manufacturers

Unit-level visibility via RFID holds the key to solving constantly evolving challenges in the pharmaceutical supply chain. The UnitVisID™ Alliance addressed these issues by defining an industry-wide performance and data-handling specification that is unifying the healthcare industry's approach to interoperable RFID-tagged medications.

What is UnitVisID?

UnitVisID is a specification maximizing the full potential of RFID for medications dispensed in hospital and healthcare organization pharmacies.

Our goal is to ensure the accuracy, performance, and interoperability of RFID-tagged medications as they move through the supply chain — from manufacturing to pharmacies and ultimately to patient administration — while interacting with systems and software along the way to solve pharmacy issues and create better patient outcomes.

UnitVisID Certified products rely on existing standards like RAIN and GS1, and have been tested to ensure:

Performance

Use of only the best RFID inlay for the size, shape, material, and application environments

Interoperability

Every medication and its unique attributes are read by all UnitVisID Certified hardware devices

Accuracy

A full and evolving record of each medication's properties and event history is stored safely in the UnitVisID Registry

Benefits of UnitVisID Certified Solutions

Interoperability

UnitVisID Certification ensures all systems work together. A record of each medication's attributes and event history is securely stored in the UnitVisID Registry and available online anytime.

RFID Portfolio

Access to a pre-screened portfolio of UnitVisID Certified RFID inlays expertly designed for any size, shape and material for medication containers.

Hospital Access

Gain new insights and emerging needs to better focus R&D resources while optimizing your go-to-market strategy to a hospital base of nearly 1,000 organizations relying on UnitVisID.

Inventory Management

Quickly and accurately communicate with hospital and healthcare organizations to manage expired, recalled or illegitimate inventories.

Robust Ecosystem

Extensive network of members with experience producing high-quality medication labeling.

Guaranteed Performance

Powerful enough to handle every type of container used for delivering medications.

Multi-Vendor Interoperability Across All Components

 **Performance**

The wide variety of containers used in a pharmacy make high performance of RFID solutions a tall order. With UnitVisID, it's possible to scan and store hundreds of fluid-filled glass and plastic containers at once, in seconds, with no errors.

The UnitVisID specification defines the performance requirements for inlays for challenging pharmacy environments filled with a variety of packaged products and fluid-filled containers being scanned in a densely-packed setting.

The UnitVisID Certification program evaluates every inlay in every downstream reading device to ensure performance, creating a comprehensive ecosystem of vendors to select for RFID integration. Furthermore, we have a variety of Certified, high-quality label converters with experience producing medication labeling.

 **UnitVisID Certification**

Pharmaceutical members need to use a UnitVisID Certified Inlay and be registered in the UnitVisID Registry. A finished pharmaceutical product may be designated as part of the UnitVisID Certified Product Program by meeting requirements for certification that are established by the UnitVisID Alliance. All UnitVisID Certified products bear the UnitVisID trademarks.

 **Interoperability**

The UnitVisID approach is much more than the product identification barcodes on today's unit-of-use medications. Once a medication is registered in the UnitVisID Registry via the cloud, an item history is captured and can be continually updated and viewed by all authorized parties -- from manufacturing all the way to patient administration. UnitVisID allows pharmaceutical manufacturers to gain access to an unlimited number of data exchanges and queries for each single-unit dose medication with up-to-date information including every location, handling event and status change throughout you're the product's lifecycle. This allows users to easily track beyond use expiration, medication compounding history, recalls and so much more.

UnitVisID Alliance Membership

UnitVisID Alliance is open to any organization interested in supporting our mission. Current members include RFID companies, pharmaceutical manufacturers, 503B outsourcing facilities, inlay manufacturers, label converters, and service suppliers. Most importantly, a continually growing number of hospitals and healthcare organizations are actively involved in the Alliance.

Become a member now and achieve greater production efficiencies for your products while collaborating with leaders from across the healthcare industry developing cutting-edge practices leveraging RFID to drive pharmacy workflow improvements.

About UnitVisID Alliance

UnitVisID is the first open, member-driven Alliance advancing the use of radio-frequency identification (RFID) tagged medications in healthcare. The Alliance brings together the leading companies in the pharmaceuticals ecosystem to lead, collaborate, and develop RFID specifications that ensure accuracy, performance, and interoperability. UnitVisID is the #1 choice used by more than 1,000+ hospitals and healthcare organizations. More than 210 million RFID-tagged medications utilizing the UnitVisID platform have been scanned – exponentially more than any other RFID system in the US healthcare space.
